THE CONCEPT OF ROAD SAFETY

Among the objects of theoretical study of ensuring traffic safety are the study of the concept of" road safety " occupies a central place. "Road there are different definitions of the concept of" safety of movement " in its content explained by the constant changes that will happen. It is natural to any phenomenon is the case. The content of road safety is inherent in the development of the state historical conditions, its theoretical concept and regulation of legislation it is also determined by the position. So, in the 90s, political and socio-economic explanation of this category, formed in the late 20th century as a result of changes, completely different from the concept of the Soviet era. In this context it should be noted that the study of this concept is based on two main "road traffic " and "security" relies on the analysis of concepts and their content and essence it is advisable to study separately.

Who envisioned road traffic.I. Clinkowstein and M.B. Afanasevs under this are pedestrians and transport of various types and non-mechanical existing complex dynamic that embodies the overall movement of its tools understand System. I.K. The opinion expressed by shakhrimanyan also noted, in which the socio-legal side of road traffic is reflected:

"Road traffic is the use of vehicles of people and cargo, as well as, people on roads without vehicles, regulated by state authorities to the traffic process, which is imposed and limited by special legal norms in an obstructing real state, conditions of a dangerous situation may arise is the movement" .

In this definition, the author Distinguished the most important socioeconomic points of view. It can be seen that one of these definitions is the disadvantage-they reflect only external social and technical aspects of road traffic continuing, the existing factors that the traffic officer can cite as reasons does not justify. Therefore, R.I. Road traffic definition given by Denisov, that is, the role of a person in road traffic, ensuring road safety the attitude to which is appropriate.

It is the object of legal regulation of road traffic studied as, without vehicles or vehicles on the roads, it is also in the process of control conditions of its movement, with the transportation of passengers and cargo proposing that the dependent necessity is seen as the sum of social relations.

However, as a result, such an approach did not have its own development, since the road taking into account the movement of pedestrians and owners of motor vehicles it was only aimed at researching the vehicles themselves.

In ensuring road safety, all road users must norms and rules of traffic that ensure disciplinary behavior administrative coercion measure for violation, disciplinary, civil and criminal legal regulation of coercive measures of the state, such as liability, is important becomes significant.

Solving the problem of ensuring road safety " road traffic safety", "public order", "public safety" to interpret concepts focused is associated with many scientific approaches. Road traffic growth of the state economy, sectors, Motor Transport the technical equipment of the docks has a significant impact on the state of Legal Regulation it manifests itself as one of the social factors that it indicates. In this regard analysis of the mechanisms of administrative and legal regulation of these relations with it is necessary to join. For this purpose I. I. The role of the emergence of Veremeenko regulation, substantiated the need to use such qualities as Essence and goals. V.V.

In the administrative-legal literature by Lukyanov “road safety the point of view on” to provide " is the development of motorization in the conditions of traffic accidents, deaths and injuries achieving a reduction in the total number of.

This in turn led to the “road traffic the essence of the concept of” safety " is the harm to human life and health, property showing that there is a need to identify as the main object of the result of the deliver.

Thus, the concept of safety in relation to road users with their constitution rights, health and safe working conditions related. As noted above, road traffic is human, as well as, subjects, means and social of Labor products to mobility it is one of the ways to satisfy your need.

Otherwise, self-driving traffic to the driver it cannot meet its needs and fulfill the interests of movement. Consequently, important life interests in the essence of the concept of security not only the maintenance of one's own life and health as a state of protection, but also it also provides for the implementation of its own needs when moving. Road taking into account the dimensions of the movement, the defense of these interests is social and it is a matter of State importance.

As can be seen from the above, the concept of " road safety processing is required based on today's requirements. Uzbekistan Road traffic to high indicators of road accidents in the Republic problems in the system of Public Administration in the field of ensuring the safety of the state politics, financing, incentives, road traffic at the godly level regulation and control in the field of further improvement of security it can be cited that the effectiveness of the mechanisms of making is insufficient.
