COUNTER-TERRORISM:CRIMES COMMITTED USING THE INTERNET

Currently, terrorism as a dangerous manifestation of organized crime has become one of the most pressing and global problems internationally.

The experience of the Republic of Uzbekistan in the fight against extremism, terrorism and their financing, the initiative in this direction is recognized by the world community.

In Particular, The President Of The Republic Of Uzbekistan Sh.M. In his speech at the 75th session of the UN General Assembly, Mirziyoev initiated an international conference dedicated to the 10-year results and future prospects of the regional joint plan, noting that effective cooperation in the field of security in Central Asia is being carried out, the UN counterterrorism strategy is being fully implemented. 2022 of the president of the Republic of Uzbekistan.

The goal of "formation of effective mechanisms for the fight against extremism and terrorism" was set out separately in the new Uzbek strategy for 2022–2026, approved by decree PF-60 of January 28. Important tasks such as active participation in international and regional organizations aimed at combating extremism and terrorism, coordination of collaborative efforts to implement the global counterterrorism strategy of the UN in Central Asia within the framework of a joint action plan, the creation of a cybercrime prevention system are relevant.

Indeed, terrorism is one of the most dangerous and complex phenomena of our time, and over time it has become more dangerous. This crime threatens security and socio-political stability, derails the peaceful and peaceful way of life in the country, causes the premature death or life of many innocent people to be threatened, unaccountable damage to the property of the state and citizens, the destruction of unrecoverable material and spiritual resources in the country, the violation of human rights and freedoms, gross unrest in the country.

Currently, with the development of the global Internet network, its wide capabilities are not only creating incomparable facilities for people, but also becoming one of the foci of danger. However, at the same time, no person can imagine his life without information technology, in particular, the internet.

The most dangerous in the world of crime, which is raging on the internet, are cyberterrorism and cyberextremism. The electronic world also promotes cyberterrorism, promoting various political forces, extremist propaganda and ideas, carrying out the activities of various criminal groups and promoting their views to the public.

Cyberterrorism is an act aimed at illegally interfering with the internal activities of Information Technology, purposefully destroying existing programs or information on a computer, causing harm, derailing the activities of important parts of state bodies, as well as causing various harmful consequences such as endangering human lives, causing material damage or mass intimidation, military conflicts.

Another reason for the rapid growth of cyberterrorism is that it will be cheaper than the terrorist act carried out in the arms company, there will be no combat actions, explosions, atrocities. Disruptive actions are carried out using the Internet and social networks.

Members of terrorist groups or organizations are seeking to commit illegal acts, using Internet capabilities for the following purposes:

- collect the necessary information in advance to commit terrorist and extremist actions;
- collection of money and other material funds for the support and implementation of terrorist and extremist actions;
-supporters of terrorism and extremism, the creation of sites that embody their goals and objectives;

https://wordlyknowledge.uz

- preparation, storage and display of extremist materials;
– informational and psychological influence on the masses, awareness of terrorist and extremist actions that are planned to be carried out in the future, etc.

The reason for the active use of the internet by terrorist organizations, first of all, is such "amenities" as ease of access and use of it, limited access to control by government agencies, too wide an audience, the ability to quickly convey information to the specified address, the preparation of materials in the form of text, graphics and audio recording.

Currently psychologically processed, militants extremist, with videos that are permeated with ideas of fanaticism along with the mobile app, the terrorist icon displays items there are more and more electronic stores that allow you to buy, too have become structural elements of cyberterrorism. We are from such danger being aware of our children from their influence in every possible way we must protect.
