PROCEDURE FOR TAXING AND WHISKING COSTS IN THE CROSS SECTION OF PRODUCTS IN INDUSTRIAL CACHES

Khazratov Sarvar Ibrahimovich

Introduction

Industrial production in the development of territories is an important role worldwide played. Industrial growth in the region includes employment opportunities, income levels and general leads to economic development. Industrial production in regional development the importance cannot be overlooked because it is economic in many areas has been a major factor in growth and development. Main industrial production one of its advantages is the creation of employment opportunities. Growth of industries directly and indirectly lead to the creation of jobs, which in the region helps to reduce the unemployment rate. As a result of industrial production in the region the employment opportunities created are not limited to the manufacturing sector,it also covers related networks such as transport, logistics and service. This areas require different skills and experiences, which can lead to the creation of different jobs, leads to the acquisition of new knowledge and skills.

Renowned economist and Columbia University professor Dr. Saxe describes economic growth as the importance of sustainable industrial development in promoting and reducing poverty says. It uses renewable energy, waste and pollution emphasizes the use of policies that promote reduction and the use of green technologies[1].

Economist and professor at the London School of economics, economic growth and he wrote extensively about the role of technology in development. It promotes industrial development by stressed the importance of technological innovation in incentives and emphasized the importance of research and supporting developments, as well as the adoption of new technologies supports Policy [2].

Harvard Business School professor Dr. Porter in promoting industrial development he wrote extensively about the role of clusters. It is responsible for ensuring economic growth through industry, government and the cooperation and partnership between scientific circles emphasized the importance and the importance of industrial clusters and promoted policies supporting the development of innovative ecosystems[3].

Industrial production in the region serves to increase the level of income. Work the creation of opportunities for provision of housing leads to an increase in income comes, which helps to improve the standard of living of citizens and families.Increased income levels also help to stimulate economic growth gives leads to an increase in consumer costs. Another of industrial production a significant benefit is the development of infrastructure in the area. Industrial growth of the region like roads, airports and ports to help improve their overall communication requires infrastructure development. Infrastructure development is not only an industry helps to grow, but also to improve the quality of life of the population of the region.Industrial production also leads to the cultivation of skilled personnel in the area. Industry growth requires a number of skills and experiences, which can be attributed to the skilled labor force leads to development. Development of the skilled labor force newly developed in the region helps to attract releases, because companies have a skilled workforce it is more likely to invest in areas that are.

In addition to economic effects, industrial production in the region is social in the region it also helps to progress. Industrial growth schools, hospitals and the community social amenities such as centers lead to an increase for residents of the region helps to improve the overall quality of life. Industrial production research and promotion of development and between enterprises, universities and scientific institutions development of innovation in the region by creating opportunities for

cooperation can. This can lead to the development of new products and technologies, which can further support regional development. Industrial production it can contribute to the development of industrial clusters in the region, which are the enterprises can create synergy between and support the growth of related networks.This can lead to increased competitiveness and innovation and promote regional development can provide further support.
