master student (Namangan Engineering and Construction Institute,Uzbekistan).

Annotation: In this article, a general analysis of the work we are doing in the road sector today, as well as the work carried out in the road sector and road traffic incidents occurring in the region, is studied. For example, the number of accidents that occurred at the intersections of "Islam Karimov Street" in Namangan region was studied and analyzed. Today, we all know that the number of cars produced in factories and factories in our republic is very high, but we all know that there have been no drastic changes on our roads. That is why we can observe the situations that occur on our roads today.

Keywords: Highway, highway, non-reverse, expressway, one-way traffic, injuries, deaths, on the street.

Introduction: Nowadays, there are shopping centers and branches, educational institutions, commercial banks on the busiest streets of Namangan city, and due to the frequent use of this area by the population, there are a lot of traffic accidents in this area.

Statistical analysis of people injured as a result of traffic accidents in Namangan city in 2018-2022.

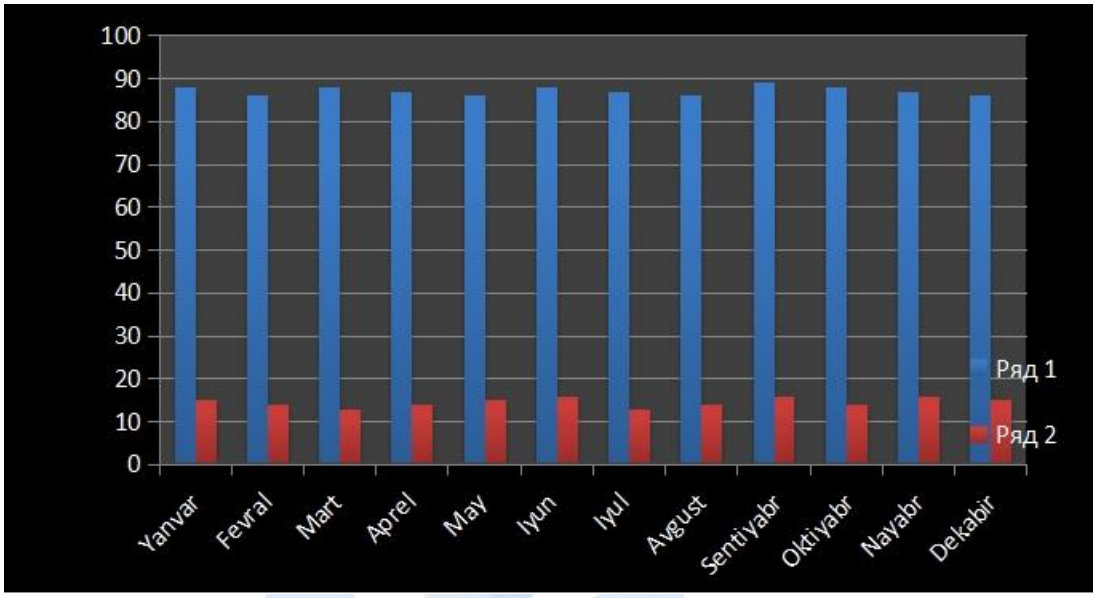

Figure 1.2. In 2018, people who were injured and died in the city of Namangan.

Based on the above graph, we can see that traffic jams and road traffic accidents are increasing sharply today, as a clear example of this, we can also learn from the number of cars produced in our country. Today, we all know that the number of cars produced in factories and factories in our republic is very high, but we all know that there have been no drastic changes on our roads. That is why we can observe the situations that occur on our roads today.

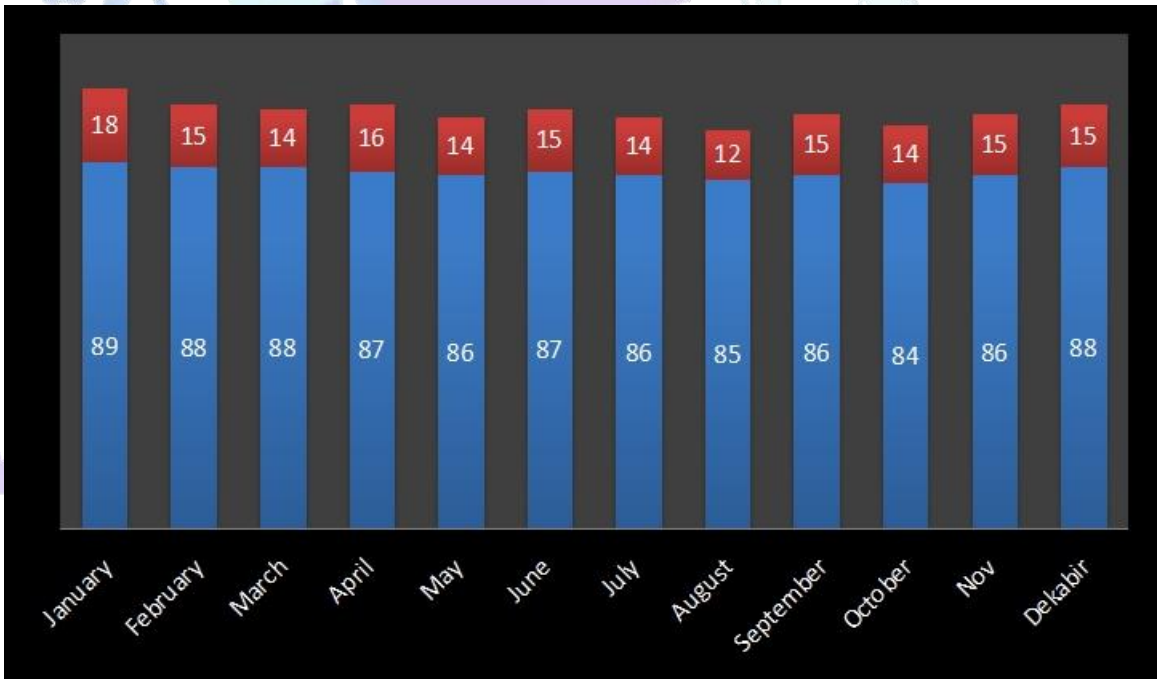

Figure 1.3.

In 2019, people who were injured and died in the city of Namangan.

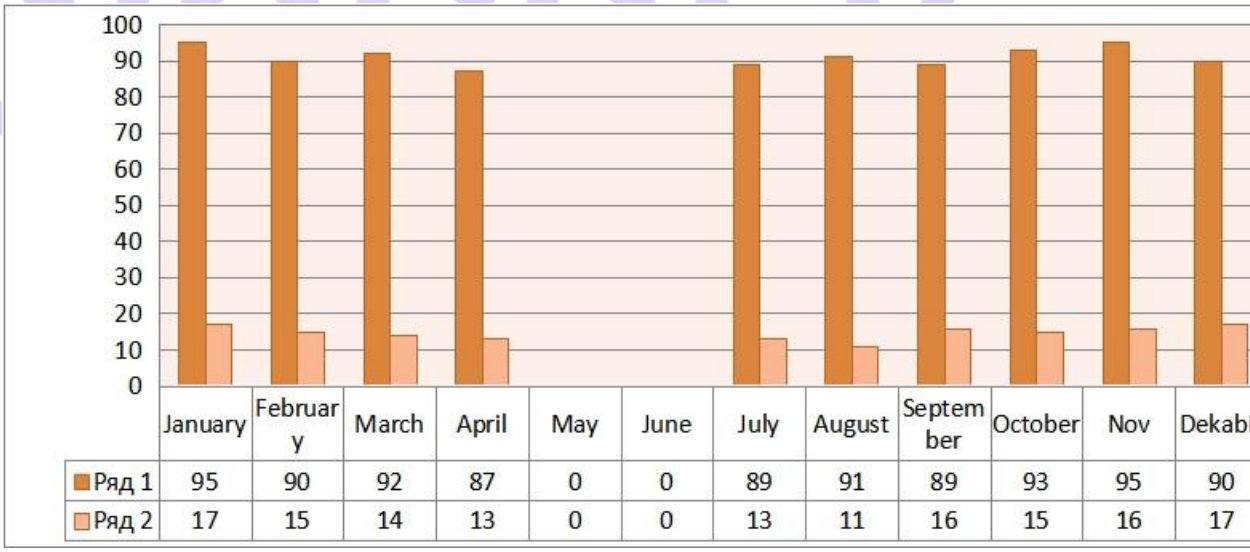

One of the factors that cause traffic accidents on the main road is traffic, so as a result of the disappearance of traffic jams on our roads, the load level of the roads will decrease, we can achieve the possibility of reducing the annual accidents. If we pay attention to those who were

injured and died from traffic accidents, the main indicator corresponds to the winter season, and the main reason for this is the decrease in the capacity of the roads in the winter season and the level of load on our roads. we can see that it has increased.

graph of traffic accidents.

It is well known to all of us that it is very difficult to imagine the life and activities of mankind without vehicles. Because the services of vehicles are widely used in all works.

First of all, the importance of safe, wide and smooth roads provided with the necessary conditions for the movement of these vehicles is incomparable. Of course, its safety directly depends on how well people use these vehicles and strictly follow the established procedures.

According to the opinions expressed by international experts, today the increasing number of traffic accidents with serious consequences worries the world community.
