Medicine of Uzbekistan in the XXI century and its achievements

Shernazarov Farrukh

Samarkand State Medical University

Annotation: Our country has always known and appreciated doctors as selfless people who have dedicated their lives to such a noble and noble cause as protecting human health. Because people trust you with their most precious treasure - their lives. The words of our great ancestor Abu Ali ibn Sina “The cure for human suffering is the highest example of nobility” confirm this idea.

Key words: Medicine, society, people, hematology.

Medicine, medicine, medicine - a set of knowledge and practical measures in the field of protecting and strengthening human health, prolonging life, preventing and treating diseases.

Medicine is divided into medical-biological, clinical, medical-social and hygienic disciplines. The medical sciences include: anatomy, histology and cytology, which study the structure of the human body; normal physiology and biochemistry, which studies the normal state of the body, the emergence, progression, course and structural and functional changes occurring in it; pathological anatomy and pathological physiology; general and clinical pharmacology, as well as microbiology, virology and parasitology, medical genetics, etc., studying the effect of drugs on the body. Clinical sciences that study human diseases, their treatment and prevention, according to the main method of treatment, are divided into therapy and surgery. These branches of medicine, in turn, are divided into different areas for a comprehensive study of diseases of certain organs and systems. MAC, cardiology in therapy, rheumatology, nephrology, gastroenterology, hematology, geriatrics, phthisiology, pediatrics, neurology, psychiatry, dermatovenereology, balneology, physiotherapy, radiology, therapeutic dentistry; In addition to surgery, general surgery, obstetric and gynecological surgery, traumatology and orthopedics, anesthesiology, resuscitation, neurosurgery, oncology, urology, otorhinolaryngology, ophthalmology, surgery. Each of the clinical disciplines has a section on patient examination and semiotics.

Organization of social hygiene and healthcare, general hygiene, hygiene of children and adolescents, communal hygiene, food hygiene, food hygiene, medical hygiene, epidemiological hygiene, occupational hygiene, occupational hygiene, medical ethics and deontology.

Such a division of medicine is conditional, since social processes are directly related to all medical sciences, as well as scientific fields (military medicine, space medicine, sports medicine, forensic medicine, etc.). The experimental method, characteristic of the biomedical sciences, is gaining ground in clinical and hygienic medicine. Medicine is closely related to natural sciences (biology, physics, chemistry) and social sciences and technology.

Reforms and efforts to improve the health of the population and improve the quality of medical services in our country, especially in the last 4-5 years, are gaining momentum. In particular, the Children's National Medical Center, built in the Yashnabad district of Tashkent on the initiative of the President, is another practical manifestation of the high attention paid to children's health.

The center is a unique project based on the latest achievements of medicine and science, specializing in pediatrics, diagnostics and rehabilitation, in the form of clusters, covering all areas of modern medicine. Currently, the complex successfully performs complex surgical

operations at the level of world standards in children with serious illnesses and returns them to a healthy life.

The National Children's Medical Center specializes in surgery, cardiac surgery, interventional cardiac surgery, urology, neurosurgery, neurology, molecular genetics and endocrinology, plastic surgery, ophthalmology, ENT, hemato-oncology, nephrology, pulmonology and gastroenterology.

Human health has always been the greatest wealth of the country, the pillar of the family, society and development of the country. Therefore, strengthening the material and technical base of the healthcare system, training qualified specialists, and improving the quality of medical services to the level of modern requirements remains a permanent issue on the agenda.

Reforms and efforts to improve the health of the population and improve the quality of medical services in our country, especially in the last 4-5 years, are gaining momentum. In particular, the Children's National Medical Center, built in the Yashnabad district of Tashkent on the initiative of the President, is another practical manifestation of the high attention paid to children's health.

The center is a unique project based on the latest achievements of medicine and science, specializing in pediatrics, diagnostics and rehabilitation, in the form of clusters, covering all areas of modern medicine. Currently, the complex successfully performs complex surgical operations at the level of world standards in children with serious illnesses and returns them to a healthy life.

The National Children's Medical Center specializes in surgery, cardiac surgery, interventional cardiac surgery, urology, neurosurgery, neurology, molecular genetics and endocrinology, plastic surgery, ophthalmology, ENT, hemato-oncology, nephrology, pulmonology and gastroenterology.

What has changed in the system as a result?

First, we have begun to fundamentally change the level of primary health care based on completely new approaches. Since last year, medical teams have been created in each microdistrict. From 2021, 66 types of medicines will be provided free of charge to the population at the primary level. Currently, our people receive the most necessary medicines for the treatment of colds, high blood pressure, heart attacks, diabetes, gastrointestinal and respiratory diseases without hesitation from family doctors and clinics.

In order to improve the quality of medical care for the population, 20,000 midwives have joined the primary care system. In addition, 801 family polyclinics in rural areas were equipped with modern ultrasound and ECG machines. As a result, 8 new types of medical services have been launched in villages and mahallas. In particular, a targeted survey of 12 million people from health risk groups has been launched. All this, in turn, was an important step in "providing the district with quality medical care."

We all know that today a person, his legitimate interests and constitutional rights are at the center of large-scale and consistent reforms in Uzbekistan. Man, his life, freedom, honor, dignity and other inalienable rights are the highest values in our society.

Article 40 of the current Constitution states: "Everyone has the right to qualified medical care." In the current conditions, when we set big goals and objectives in the field of healthcare, this constitutional article alone is not enough.

Today we need to further strengthen the constitutional foundations of our medical system. Therefore, the issue of transforming the domestic health care system into a highly qualified modern industry that will serve to improve the quality of public health, of course, should be reflected in our Constitution as a directly applicable constitutional norm
